

Atom Guide

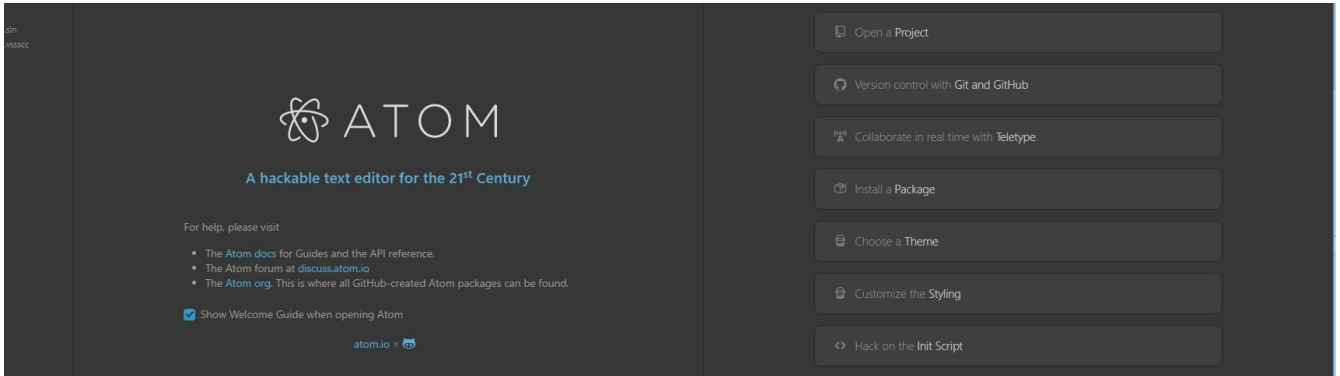

Atom is a code editor developed by Github. If you want to use Atom to code, please refer to the following guide.

Before reading the instructions, you need to do some things first.

- Download and install Atom
- Install the C/C++ environment(the tutorial is in the repository)

Instructions

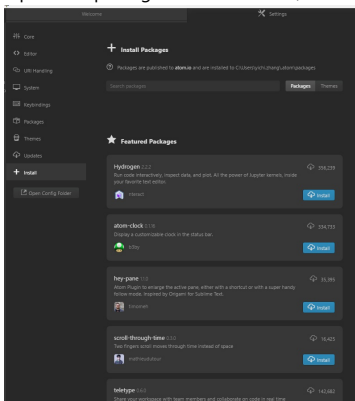

1. At the main page of input, open the "install a package" tab and enter the package installation page.

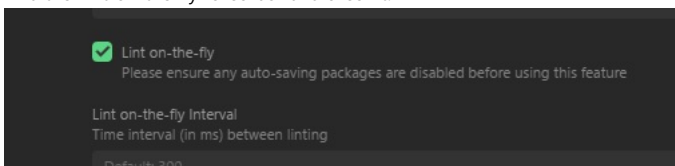

2. Install the following packages:

- gcc-make-run
- linter
- linter-gcc

3. Open the "packages" tab on the left, and find linter-gcc package, get into the setting of it.

4. Find the "lint-on-the-fly" checkbox and check it.

5. The installation is completed. You can use Atom to write a C or C++ code and run it by clicking F6.
6. For projects which contains various files, you should click ctrl+F6 and put all .c/.cpp files other than the current file into the "Compiler Tags" blank and run.
